DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 9-10, and 19, are rejected under 35 U.S.C. 102(e) as being anticipated by the submitted prior art of Lane et al (P.N. 5,377,051).

Lane et al disclose a video recording/reproducing apparatus that shows all the limitations recited in claims 9-10, and 19, including the feature of the source of the MPEG bit stream signal coupled to the apparatus for recording (See Lane et al's Figure 10a), the feature of generating a record signal representative of the MPEG bit stream signal (See Lane et al's Figure 10a, component 342), the feature of the pair of record transducers each aligned for recording the record signal and having complimentary azimuth angles (See Lane et al's Figure 10a, component 340) and the feature of identifying the intra coded frame occurrence in the MPEG bit stream signal and responsive to said identifying signal the control means initiates recording of a record signal representative of the intra coded frame part of the MPEG bit stream by a predetermined one of the transducer pair having a specific azimuth angle as specified in the present claims 9-10 and 19. (See the capability of initiating the recording of trick

play data "intra frame coded data" when intra frame coded data are detected based on identification provided thereof as disclosed in Lane et al's column 50, lines 49-56, and column 31, lines 53-64).

Allowable Subject Matter

3. Claims 15-18 contain allowable subject matter over the prior art of record.

Conclusion
